### *U.S. Xpress Enterprises Deploys DriverTech™ DT4000's*

Salt Lake City, Utah, October 25, 2006 (BUSINESS WIRE) - DriverTech, a leading provider of onboard computers for the trucking industry, announced today that U.S. Xpress Enterprises (NASDAQ: XPRSA) has adopted the DriverTech DT4000 TruckPC™ with Tri-Mode Communications for significant rollout throughout its fleet.

Max L. Fuller, CEO and Co-Chairman of U.S. Xpress, stated, "After months of intense testing and scrutiny we selected the DriverTech system on the basis of ROI and performance in the cab. We believe that this system represents the next generation of in cab communication products. " The DriverTech DT4000 TruckPC, running WindowsXP, is designed specifically for in cab use in the transportation industry. "This system is going to revolutionize the way we support our drivers and satisfy our customers," added Fuller.

The DT4000 TruckPC provides a long awaited innovation in on-board communications for trucks. Leveraging a true Tri-Mode communications system (satellite, cellular, and Wi-Fi) to deliver intelligent least cost communications between the driver and dispatch, the DT4000 provides communications at a fraction of the traditional airtime costs associated with over-the-road communications. Because the DT4000 runs WindowsXP operating system a broad spectrum of applications, from fuel optimization and GPS navigation, to fuel tax and hours of service reporting, can now be run simultaneously in the cab.

"We're particularly excited about expanding services to our drivers and making their jobs easier to perform," said Jeff Seibenhener, Vice President of Technology, "The more connected they are in the cab, the better our fleet performs." US Xpress has designed a driver portal that will allow drivers to see real-time information, communicate with one another, receive training content remotely, and enable in cab education thru Transmarket's In-Cab University. US Xpress will also utilize TREAD-1 computer-based driver training modules enabled by Transmarket's In-Cab University.

"We're delighted that US Xpress has extended us the trust," said Mark Haslam, DriverTech's president and CEO, "The DriverTech system finally gives trucking companies the computing and

communication platform they need to leverage the many high-speed wireless networks, software applications and services available to them."
